Systems Integration

Overview

Shee Atiká Enterprises, LLC (SAE) is trusted to solve complex challenges for our clients and partners. At the forefront of a specialized niche in federal contracting, SAE is dedicated to driving advancements in scientific and technological integration. Our focus lies in optimizing systems to enhance efficiency and effectiveness across diverse domains, from improving operational workflows to maximizing resource utilization. SAE's expertise extends to evaluating and managing initiatives aimed at enhancing, human performance, organizational effectiveness, and achieving strategic objectives. This includes implementing cutting-edge technologies and integrating disparate systems to streamline processes and improve overall outcomes. Whether orchestrating digital transformation initiatives or pioneering innovative solutions, SAE is committed to delivering results that drive progress and innovation.

As an SBA-certified 8(a) Alaska Native Corporation subsidiary, SAE is eligible to perform direct awards. This unique contracting vehicle streamlines the procurement process for the client, project partners, and the end user. The final result is a cost-effective solution that meets mission requirements at the speed of innovation.

CONTRACT VEHICLES

- ANC 8(a) SDB Direct Award (up to \$100M) for DoD

Featured Customers

“ The management team at SAE was very strong. The team included the complementary expertise needed to achieve the goals of the contract, and management appropriately integrated subject matter experts and collaborators to achieve maximum results. SAE staff exhibited a very high level of technical competence, flexibility, and creativity in managing the overall project. The SAE management team proactively identified challenges and capitalized on emerging opportunities. ”

- Contracting Officer, National Institutes of Health, National Cancer Institute

GOVERNMENT SOLUTIONS BEYOND EXPECTATION

Specialties

APPLIED RESEARCH

SAE continuously monitors the pulse of the medical and scientific industry. We partner with companies at the forefront of innovation and connect these technologies to government agencies. Together, we deliver solutions for America's military and families.

SCIENTIFIC STUDIES

Scientific studies provide valuable data and analysis that inform strategic planning and decision-making processes within the U.S. military and government agencies. Research findings help identify emerging threats, assess risks, and develop strategies to address complex security challenges.

TARGETED PERSONNEL ACQUISITION

We identify highly qualified scientific/medical technical talent and specialists, ensuring a seamless fit through our proven selection process. Finding subject matter experts with the right skills and attitude is challenging. You need staff who can deliver on the job and also align with your company's values, behaviors, and work culture.

SYSTEMS INTEGRATION

Integrating a subsystem into an established platform or program poses inherent risks and complexities, including compatibility, compliance, data security, and performance concerns. Our approach involves collaborative strategic planning, clear communication, technical proficiency, and rigorous project management to ensure mission success.

Featured Work

SAE was involved in a COVID-19 care study focused on increasing access to care for medically underserved areas and populations. In the study, SAE used a digital health platform along with Bluetooth-syncing devices to keep track of participants' important health information. Data stayed safe and private by controlling access via stringent security measures. One important safety feature was encrypting all data sent between devices and the platform. We also stored all of the data in a strict HIPAA-compliant cloud-based system. By connecting the digital health platform to the devices collecting data from participants, we could monitor health in real time. This helped us respond quickly to any changes in the participant's vital information. Plus, because we made privacy and security a top priority, participants could feel confident that their personal health information was being kept safe and confidential.

SHEE ATIKÁ FAMILY OF COMPANIES

Our purpose is to ensure Shee Atiká's future value for more than 3,400 Alaska Native shareholders through sustainable economic growth. Shee Atiká is headquartered in Sitka, Alaska.
